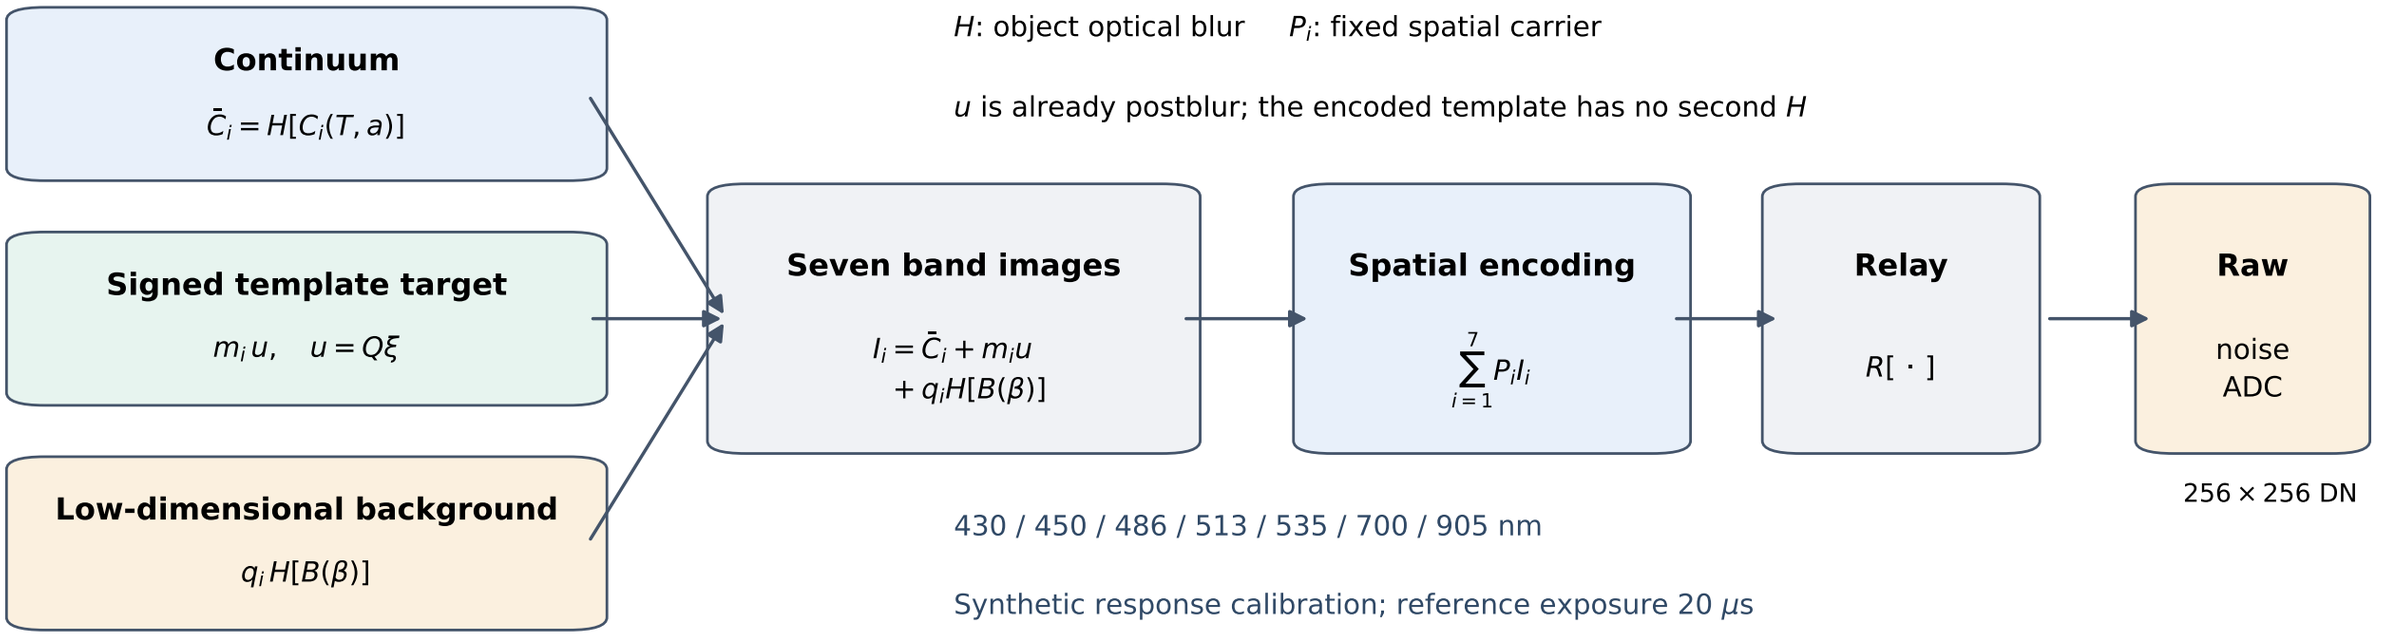
(a) One shared seven-band coded measurement



(b) The same targets for every estimator

Primary target	Additional resolution analysis	Additional resolution analysis
$\sigma = 0$ px	$\sigma = 2$ px	$\sigma = 4$ px
$u_\sigma = G_\sigma * u$	$u_\sigma = G_\sigma * u$	$u_\sigma = G_\sigma * u$
$T_{\mathrm{col},\sigma} = h[(G_\sigma * \bar{C}_{700})/(G_\sigma * \bar{C}_{905})]$	$T_{\mathrm{col},\sigma} = h[(G_\sigma * \bar{C}_{700})/(G_\sigma * \bar{C}_{905})]$	$T_{\mathrm{col},\sigma} = h[(G_\sigma * \bar{C}_{700})/(G_\sigma * \bar{C}_{905})]$

Template: electrons at 20 μs. Temperature: postblur continuum color temperature in K. Smooth bands before taking their ratio.
